#3

[mobile] Forced reflow

RECOMANDARE (TL;DR)

A forced reflow occurs when JavaScript queries geometric properties (such as `offsetWidth`) after styles have been invalidated by a change to the DOM state. This can result in poor performance. Learn more about [forced reflows] (<https://developers.google.com/web/fundamentals/performance/rendering/avoid>)

### RECOMANDARE (TL;DR)

[Avoid chaining critical requests]

(<https://developer.chrome.com/docs/lighthouse/performance/critical-request-chains>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.
